Sustainability Policy

We understand that sustainability means adapting to live responsibly and within our means. As such Aqua Window And Property Cleaning Services Limited have identified that our place in the business environment lifecycle means we need to consider and act on a broad range of sustainability issues. We have a framework of ISO 14001 with which we use to structure a number of initiatives and will in addition, provide written evidence of further sustainability efforts achieved by our own implementation.

Our Customers

We will ensure our sustainability advice to customers is innovative, practical and effective, helping them to enhance their own sustainability targets and objectives, meet and exceed legislative demands and support and respect the local community and environmental initiatives. Particular focus will be attributed to the consideration for resources and energy efficiency in addition to educating employees on the benefits to health, safety and future planning from a sustainable office environment.

Our Office

We will pursue actions to further reduce our office energy consumption, develop a green travel plan to reduce our carbon emissions and identify areas to reduce the amount of general waste we produce.

Our Supply Chain

We will work with our current suppliers to promote our sustainable approach and to enhance their own sustainable practices. Local suppliers are particularly encouraged and will be highlighted through the development of our monitored sustainable supply chain.

Our Community

Via involvement through a variety of means, we shall continue the support of local 'not for profit' organisations. We will also continue to donate our services to local organisations, where we can commit our time and knowledge to the betterment of the community in which we work.

Employees

The health and wellbeing of our staff is vitally important to us and we strive to provide a work environment that is upbeat, positive and inspirational. We will ensure our employees have access to and are provided with the appropriate sustainability training to help them with their competence and awareness in this sector.
